

## Texas Extends Use of Negotiated Experience Modifiers in Workers' Comp

The Texas Department of Insurance has approved IIAT's request to extend the use of negotiated experience modifiers in the state's workers' compensation system for another year.

Without the change, under the NCCI Experience Rating Plan Manual, which Texas adopted in 2015, the use of negotiated experience modifiers was set to expire on July 1, 2018.

### What You Need to Know

- The ability to negotiate mods has been extended one year to 7/1/19
- Many Risk Managers use 1.00 e-mod as an absolute access to work
- E-mod should be one part of an overall "safety rating" not the exclusive barometer

### Encourage Your Clients to Contact their Trade Associations Now!

- Primary industries affected are: Petrochemical, Construction and Oil and Gas.
- Ask clients in these industries to push back against the use of e-mod as sole criteria to work.
- Let all of your clients with a negotiated WC e-mod know that they alone can get the needed changes made.
